”; Close the patch When you have registered your license you will receive an email with a link to the activation website for AutoCAD 2010. Click on the link and follow the steps to activate AutoCAD 2010. (Note: Activating the application may take some time as there are currently a number of license holders who are activating simultaneously.) After activating AutoCAD 2010, you will receive another email from one of the registered license holders. Note that not all of the planned features are available for activation at this time. We plan to release additional features in the next release. As we have no other choice but to do so, we will have to charge a fee for the activation. We hope that the fee will be less than the one we have today. We are currently working on a new fee structure and will inform you of the new fees as soon as they have been set. We hope that you will like the new fee structure as much as we like it. Best regards, * Sebastian Molter President AutoCAD 2010 (autocad.com)

[^1]: The supporting members of the Editor Editorial Team are as follows: [^2]: Q: BxSlider - Place only a single image in each slide? The below code shows you the code I have and the way it is currently working, which is creating 10 images within each of the slides. I want to reduce it down to just one image being created, and perhaps the caption under it as well. The only way I could get this to work is by setting: \$i = 0; \$slides = 10; This only creates one image in every slide. Here is my code so far:

```
prepare("SELECT image FROM projects WHERE id = :id LIMIT 1"); 82157476af
```
